DURAKOTE

What is Durakote?

It is a specially treated polyester film for printing in dry toner electro-photo digital colour presses. Durakote is treated on both sides to facilitate duplex printing, and is thermally stabilised to reduce shrinkage.

Available in Translucent and White plus with adhesive

- * Durakote provides exceptional print receptiveness and ink anchorage without sacrificing high colour definition.
- * Durability - tear resistant Durakote Polyester will withstand the most demanding of conditions and uses.
- * Water Resistance - for applications such as menus, underwater maps, mining instructions or boat manuals
- * Solvent Resistant - when the challenge is in contact with chemicals and oils
- * Optical Clarity - can be used for transparencies
- * Controlled Shrinkage - easy handling both during printing and in high temperature applications
- * Translucent Durakote can be used for light boxes
