

Data Sheets

SPLENDORGEL EW

An ultra smooth, high white, wood free uncoated paper with a velvety surface for use on HP Indigo presses.

From WELL MANAGED FORESTS

This aims to certify the origin of paper-making fibres from integrated and sustainable forestry operations where controlled felling and replanting policies are enacted.

ELEMENTAL CHLORINE FREE

Also known as ECF ensures low content of derivative organic chlorine (AOX values less than 0.6 kg/tons). It highlights that the pulp used was whitened using ecological processes.

pH NEUTRAL

This indicates the neutral status of the paper; generally determined by the use of so called "acid free" production processes. The pH is calculated from a water extract of the paper.

HEAVY METAL ABSENCE - CE 94/62

This certifies product conformity with the CE 94/62. "Concentrations of heavy metals in packaging" directive defining the maximum concentrations of heavy metal (Cadium, Chrome, Mercury and Lead)

LONG LIFE - ARCHIVAL

This is based on the ISO9706 "long life paper" standard which defines the requirements for such papers. It especially envisages a content of wood pulp or semi-chemical pulp not exceeding 5%, a pH calculated from the water extract between 7.5 and 10 and an alkaline reserve (buffer) higher than 2%.

Data Sheets

TINTORETTO

Paper & Board felt marked both sides.
